the first part of the term doing mostly computational work they are unprepared for the rigors of conceptual thinking in an  
abstract setting that is frequently the focus of the second half of the course Holt's Linear Algebra with Applications blends  
computational and conceptual topics throughout Early treatment of conceptual topics in the context of Euclidean space gives  
students more time and a familiar setting in which to absorb them This organization also makes it possible to treat  
eigenvalues and eigenvectors earlier than in most texts Abstract vector spaces are introduced later once students have  
developed a solid conceptual foundation Concepts and topics are frequently accompanied by applications to provide context  
and motivation Because many students learn by example Linear Algebra with Applications provides a large number of
