The natural world is marked by an ever increasing loss of varied habitats a growing number of species extinctions and a full range of new kinds of dilemmas posed by global warming At the same time humans are also working to actively shape this natural world through contemporary bioscience and biotechnology In *Cloning Wild Life* Carrie Friese posits that cloned endangered animals in zoos sit at the apex of these two trends as humans seek a scientific solution to environmental crisis Often fraught with controversy cloning technologies Friese argues significantly affect our conceptualizations of and engagements with wildlife and nature By studying animals at different locations Friese explores the human practices surrounding the cloning of endangered animals She visits zoos the San Diego Zoological Park the Audubon Center in New Orleans and the Zoological Society of London to see cloning and related practices in action as well as attending academic and medical conferences and interviewing scientists conservationists and zookeepers involved in cloning Ultimately she concludes that the act of recalibrating nature through science is what most disturbs us about cloning animals in captivity revealing that debates over cloning become in the end a site of political struggle between different human groups Moreover Friese explores the implications of the social role that animals at the zoo play in the first place how they are viewed consumed and used by humans for our own needs A unique study uniting sociology and the study of science and technology *Cloning Wild Life* demonstrates just how much bioscience reproduces and changes our ideas about the meaning of life itself
