

SQL

(Michelle Calles)

What is SQL? Stands for structured Query Language. Lets you access and manipulate databases.

Some of The Most Important SQL Commands

- **SELECT** - extracts data from a database
- **UPDATE** - updates data in a database
- **DELETE** - deletes data from a database
- **INSERT INTO** - inserts new data into a database
- **CREATE DATABASE** - creates a new database
- **ALTER DATABASE** - modifies a database
- **CREATE TABLE** - creates a new table
- **ALTER TABLE** - modifies a table
- **DROP TABLE** - deletes a table
- **CREATE INDEX** - creates an index (search key)
- **DROP INDEX** - deletes an index

The **SELECT** statement is used to select data from a database. The data returned is stored in a result table, called the result-set.

Syntax.

```
SELECT column1, column2, ...  
FROM table_name;
```

If you want to select all the fields available in the table, use the following syntax:

Syntax.

```
SELECT * FROM table_name;
```

The following SQL statement **selects all the columns** from the "Customers" table:

Syntax.

```
SELECT * FROM Customers;
```

The **SELECT DISTINCT** statement is used to return only distinct (different) values. Inside a table, a column often contains many duplicate values; and sometimes you only want to list the different (distinct) values.

Syntax.

```
SELECT DISTINCT column1, column2, ...  
FROM table_name;
```
