

PRE-LAB QUESTIONS – LAB 19

1. How are electric potential and electric field similar? How are they different?
 - a. The relation between electric potential and an electric field is given as, $dV = -Edx$ or, $E = -dV/dx \rightarrow E = -\text{grad}V$
 - b. This is the similarity between the electric field and electric potential. The difference between electric field and electric potential is the electric field is a vector quantity. But, the electric potential is a scalar quantity. The electric potential for a point charge is $V = k \times Q/r$ so, the potential depends on V , Q and $1/r$. And, the electric field for a point charge is $E = K \times Q/r^2$ so, the electric field depends on E , Q and E , $1/r$.
2. Draw the equipotential lines for a single, positive, charge.

3. If you were to walk on an equipotential line, how would your electric potential change over time?
 - a. The potential is constant throughout the equipotential surface. Thus, the potential does not change as the time passes.
4. What does it mean when equipotential lines are closer together? What does it mean when they are farther apart?
 - a. Using the relation, $E = dV / dr$. Thus, closer to the equipotential lines, stronger will be electric field. And the electric field will be weak if the equipotential lines are far from each other.
5. What direction do electric fields travel?

Collaborative Networked Organizations Luis M. Camarinha-Matos, Hamideh Afsarmanesh,2007-05-08 A research agenda for collaborative networks Purpose Many practical application experiments and pilot cases nowadays provide evidence on what works and what still remains as a challenge for collaborative networked organizations CNOs The fast evolution of the information and communication technologies and in particular the so called Internet technologies also represents an important motivator for the emergence of new forms of collaboration However most efforts in this area are highly fragmented considering only some partial facets and not a holistic perspective that would be required We are therefore at a point in which it is necessary to define much more consolidated and sustainable research strategies for a second phase of research and development in this area This book addresses the main disciplines involved in CNOs It further synthesizes the views and opinions expressed by a large number of visionaries from the main disciplines involved in CNOs and offers a comprehensive set of recommendations for the establishment of a research agenda on collaborative networks As recognized experts in their specific areas different authors in this book have presented work that is backed by a large number of research results each focusing on specific facets of collaborative networks and coming out of a large number of international and national projects *Scientific and Technical Aerospace Reports* ,1987 **Science** John Michels (Journalist),2005 A weekly record of scientific progress **Cumulated Index Medicus** ,1999 *Subject Guide to Children's Books in Print* ,1974 *El-Hi Textbooks & Serials in Print, 2005* ,2005 **Whitaker's Cumulative Book List** ,1970 **Current Book Review Citations** ,1983 *Electricity and Magnetism* ,2005 *NICEM Index to Nonprint Special Education Materials*,
