JGI '02 ACM Special Interest Group on Programming Languages,2002 *Numerical Solution of Partial Differential Equations on Parallel Computers* Are Magnus Bruaset, Aslak Tveito, 2006-03-05 Since the dawn of computing the quest for a better understanding of Nature has been a driving force for technological development Groundbreaking achievements by great scientists have paved the way from the abacus to the supercomputing power of today When trying to replicate Nature in the computer s silicon test tube there is need for precise and computable process descriptions The scientific elds of Mathematics and Physics provide a powerful vehicle for such descriptions in terms of Partial Differential Equations PDEs Formulated as such equations physical laws can become subject to computational and analytical studies In the computational setting the equations can be discretized for efficient solution on a computer leading to valuable tools for simulation of natural and man made processes Numerical solution of PDE based mathematical models has been an important research topic over centuries and will remain so for centuries to come In the context of computer based simulations the quality of the computed results is directly connected to the model s complexity and the number of data points used for the computations Therefore computational scientists tend to ll even the largest and most powerful computers they can get access to either by increasing the size of the data sets or by introducing new model terms that make the simulations more realistic or a combination of both Today many important simulation problems can not be solved by one single computer but calls for parallel computing
