Fine Pitch Surface Mount Technology Phil Marcoux, 2013-11-27 Fine pitch high lead count integrated circuit packages represent a dramatic change from the conventional methods of assembling electronic components to a printed interconnect circuit board. To some these FPT packages appear to be an extension of the assembly technology called surface mount or SMT. Many of us who have spent a significant amount of time developing the process and design techniques for these fine pitch packages have concluded that these techniques go beyond those commonly used for SMT. In 1987 the present author convinced of the uniqueness of the assembly and design demands of these packages chaired a joint committee where the members agreed to use fine pitch technology FPT as the defining term for these demands. The committee was unique in several ways, one being that it was the first time three U.S. standards organizations, the IPC, Lincolnwood, IL, the EIA, Washington, D.C., and the ASTM, Philadelphia, came together to create standards before a technology was in high demand. The term fine pitch technology and its acronym FPT have since become widely accepted in the electronics industry. The knowledge of the terms and demands of FPT currently exceed the usage of FPT packaged components, but this is changing rapidly because of the size, performance, and cost savings of FPT. I have resisted several past invitations to write other technical texts. However, I feel there are important advantages and significant difficulties to be encountered with FPT.

**Applied Surface Mount Assembly** Robert J. Rowland, Paul Belangia, 1993-02-28 A practical guide to setting up and running a surface mount operation, now the most widely used method of placing components on printed circuit boards as part of assembling electronic devices. Among the topics are laying out a printed circuit board, choosing the right component, and the manufacturing process, plant layout, and process flow, and monitoring and evaluating the process.
