continued build up of N<sub>2</sub>O in the atmosphere will continue to deplete the stratospheric ozone layer and in so doing will to a degree undermine the achievements of the Montreal Protocol The build up of N<sub>2</sub>O will also make it more difficult to achieve climate targets Two thirds of current anthropogenic N<sub>2</sub>O emissions originate from agriculture and these can be reduced by boosting nitrogen use efficiency especially by making the use of fertilizer manure and feed more efficient Improving nitrogen use efficiency can be accomplished through a wide variety of feasible options
