

Indirect Proof:

So far, we have used direct proofs to prove statements. A less common method used in the indirect proof, the indirect proof is a proof in which you assume the conclusion is false and use deductive reasoning to find an contradiction thereby proving the conclusion of the theorem true.

Suppose you had the given "B is not outside."

You can begin by assuming the opposite of what you want to prove, "B is not cold outside."

If B were not cold, then that grass would not be covered with snow, the kids have would not have their hands, and their would not wear the mittens, that B has to wear on the ground, the kids have have lost their mittens, and that does cause the mittens. All these facts contradict what we know to be true about what happens when it is not cold outside. Therefore, we were conclude that it is cold outside.

Indirect reasoning may also be used when a person either asks a subject what he was when a crime was committed. If the person has a 3 month memory at the time, the lawyer will use indirect reasoning to prove his client's innocence. The lawyer will begin by assuming that the defendant committed the wrongdoing. Then, he will prove that the defendant was at a friend's house when the crime occurred. Since he could not have been in two places at once, he could not be guilty. Lawyers also use indirect reasoning to making important conclusions on scientific issues of an illness.

Remember these steps when using an indirect proof:

1. Assume the opposite of the claim.
2. Use deductive reasoning to find an contradiction.
3. Prove the conclusion of the theorem true.

Exercise 11: If two lines are parallel to the same line, then they are parallel to each other.

Follow the reasoning of the indirect proof of Theorem 11.

Given: $l \parallel m$ and $m \parallel n$.

Prove: $l \parallel n$.

Proof:

Statements	Reasons
1. $l \parallel m$ and $m \parallel n$.	1. Given
2. Assume that l is not parallel to n .	2. Assumption
3. Lines l and n intersect at point A .	3. Two lines in a plane must either intersect or are \parallel , $l \not\parallel n$.
4. Thus, the assumption that l is not parallel to n is false.	4. Opposite Postulate (CP. 2)
5. $l \parallel n$.	5. Contradiction
