

### Measuring Earthquake Strength, *continued*

- **Modified Mercalli Intensity Scale** A measure of the degree to which an earthquake is felt by people and the damage it caused is called intensity.
- Currently, seismologists use the Modified Mercalli Intensity Scale to measure earthquake intensity. This is a numerical scale that uses Roman numerals from I to XII to describe earthquake intensity levels.

hazard posed by intraplate earthquakes Although it may be a very long time before the scientific issues are resolved the progress being made is helping attempts to estimate the probability size and shaking of future earthquakes and the uncertainty of the results A third group of papers explores the question of how society should mitigate the possible effects of future large continental intraplate earthquakes Communities around the world face the challenge of deciding how to address this rare but real hazard given the wide range of other societal needs Continental intraplate earthquakes will remain a challenge to seismologists earthquake engineers policy makers and the public for years to come but significant progress toward understanding and addressing this challenge is now being made Publisher s website [Plate Boundaries and Natural Hazards](#) Joao C.
