Human Endocrinology Paul R. Gard, 2002-09-11 The endocrine system is an efficient means of controlling via hormones large numbers of cells at many different sites in the body, and it is the most important factor in the control of the basic processes of the individual, such as metabolism, growth, and reproduction. Human Endocrinology is a concise, lucid explanation of how hormones are secreted by various glands into the blood and dispersed to cells within the body. Each hormone group is described in a separate chapter, dealing with the factors affecting the hormone's secretion and the use of particular hormones in the treatment of disease. Disorders of the endocrine system, such as diabetes and some forms of dwarfism, and the use of hormones in medicine, such as oral contraceptives, are covered. The illegal use of hormonal drugs, for example anabolic steroids in sport, is also discussed. The author's accessible style and extensive use of figures and tables make this a valuable text for all students studying the subject as part of many bioscience courses, including medicine, nursing, physiology, pharmacy, pharmacology, and biomedical science.
