*Impulse zur Fremdsprachendidaktik - Issues in Foreign Languages Education* Roland Ißler, Uwe Küchler, 2020-12-14  
Angesichts erhöhter Anforderungen an Kommunikation und interkulturelle Verständigung in einer wirtschaftlich und kulturell vernetzten Welt kommt dem schulischen Fremdsprachenunterricht und mithin der Fremdsprachendidaktik als wissenschaftlicher Disziplin eine zunehmende Verantwortung zu. Die Bonner Lehrerbildung, die mit den Fächern Englisch, Französisch, Italienisch und Spanisch sowie Latein und Altgriechisch eine Reihe der wichtigsten modernen und klassischen Schulsprachen umfasst, stellt sich dieser gesellschaftlichen Herausforderung mit dem Bekenntnis zu einer fächerübergreifenden Fremdsprachendidaktik mit fachwissenschaftlicher Grundierung. Dieser Band gibt in 18 Beiträgen Impulse für Unterricht und Lehrerbildung in den genannten Fächern. In the face of manifold global economical and cultural cross links international communication and intercultural understanding get increasingly more demanding. With this the school languages as well as foreign language education carry a wider importance and responsibility. With English, French, Italian and Spanish as well as Latin and Greek the Bonn model of teacher education encompasses the most crucial modern and classical school languages. The university meets the societal challenges with a strong commitment to an interdisciplinary departments of foreign language education and their grounding in the related academic disciplines. *Rapid Population Growth and Human Carrying Capacity* Dennis J. Mahar, Robert J. Muscat, 1985. The most dire consequences of rapid population growth are thought by some to emerge in places where the size of the human population exceeds the carrying capacity of the land. This paper explores the possible meanings of the idea of carrying capacity under developing country conditions, looks at historical and present day cases of alleged overpopulation in relation to carrying capacity, examines some of the systems and effects where such situations may be present, reviews some of the dynamic adaptations made by populations living under such pressures, and suggests some of the consequences for economic development and some of the options for public policy.

*Rapid Population Growth and Human Carrying Capacity*, 1985 **On the Cusp** Charles S. Pearson, 2015-06-15. For much of its history, human population growth increased at a glacial pace. The demographic rate only soared about 200 years ago, climaxing between the years 1950 and 2000. In that 50-year span, the population grew more than it had in the previous 5,000 years. Though these raw numbers are impressive, they conceal the fact that the growth rate of population topped out in the 1960s and may be negative later this century. The population boom is approaching a population bust despite the current world population of seven billion people. In *On the Cusp*, economist Charles Pearson explores the meaning of this population trend from the arc of demographic growth to decline. He reviews Thomas Malthus's famous but mistaken 1798 argument that human population would exceed the earth's carrying capacity. That argument has resurfaced, however, in the current environmental era and under the threat of global warming. Analyzing population trends through dual lenses, demography and economics, Pearson examines the potential opportunities and challenges of population decline and aging. Aging is almost

universal and will accelerate Mitigating untoward economic effects may require policies to boost fertility which has plunged increase immigration and work longer harder and smarter as well as undertake pension and health care reform all of which have hidden costs The writing is rigorous but not technical and is complemented by a helpful set of figures and tables Sharp bold and occasionally funny Pearson's research has thought provoking implications for future public policies He ends his analysis with a modestly hopeful conclusion noting that both the rich and the poor face a new demographic order General readers and students alike will find *On the Cusp* an informative and engaging read *Carrying Capacity Reconsidered* Irmi Seidl, Clement Allan Tisdell, 1998 In this paper the concept of carrying capacity is investigated to provide an improved understanding about its contribution to solve environmental problems Light is shed on its form interpretation and application in biology demography applied and human ecology *Carrying Capacity and World Population* Barbara A. Keeler, 1978

**Rapid Population Growth and Human Carrying Capacity** Barbara K. Herz, Thomas William Merrick, 1985 *World Population* Yves Earhart, 2024-10-14 *World Population* offers a comprehensive exploration of humanity's demographic journey and its profound implications for Earth's future This book delves into historical population growth current trends and future projections providing crucial insights into the complex relationship between human society and our planet's resources By tracing population dynamics from prehistoric times through major events like the Agricultural and Industrial Revolutions it equips readers with essential context and demographic concepts The book's central argument emphasizes the fundamental importance of understanding and managing global population trends in addressing pressing challenges such as climate change resource scarcity and economic inequality It presents a balanced approach to this often polarizing topic offering multiple perspectives on population issues Drawing from diverse sources and employing innovative data visualization techniques *World Population* makes complex demographic trends accessible to a general audience Structured to guide readers through the complexities of population studies the book progresses from core demographic principles to historical patterns current global trends and future scenarios It explores the interdisciplinary nature of population studies connecting demography to economics environmental science and sociology By examining potential strategies for sustainable population management and their policy implications *World Population* provides valuable insights for policymakers urban planners and anyone seeking a deeper understanding of how population trends shape our world *Too Many Humans* Morrison Bonpasse, 2015-04-19 This Little Green Book presents 21 proposals for reducing the size of the human population to 1 billion people in order to enable humanity to live sustainably on Earth For centuries and millennia humans have exploited the inherited riches of the Earth without significant observable permanent harm The Industrial Revolution which used non human non animal power sources to accomplish tasks began in the 18th century in Europe and North America In the early 19th century that power increasingly came from the burning of fossil fuels primarily coal and oil and that burning created carbon dioxide The ills of fossil fuel burning were compounded by population growth Around the beginning of the 19th

century medical and nutritional advances led to the reduction of the death rate and populations began to grow more rapidly. This change can be said to be the beginning of the Demographic Transition which is defined as the period during which there is a large gap between the declining death rate and the subsequent reduction of the birth rate which typically occurs several generations later. Proposed here are additional stages of the model to show a Sustainable Demographic Transition (SDT) to a human population of 1 billion which was the population of the Earth around 1800. The question posed in this book is whether the human birth rate can be reduced soon enough to avoid much of the potential further damage to the Earth and reduced further to enable remediation of previous damage. The year 1800 is chosen in this book as the pivotal year for the Industrial Revolution and Demographic Transition. At that time the carbon dioxide density in the atmosphere was approximately 300 parts per million. During the subsequent 215 years the Industrial Revolution accelerated and together with exponential population growth has degraded the ability of the Earth to sustain life. Whatever damage to the Earth the Industrial Revolution would have produced for a planet supporting one billion humans that damage has been multiplied so far by the growth of the human population since 1800 to 7.3 billion by mid 2015. If not stopped the multiplier will continue to grow. Even at the current and seemingly slow annual growth rate of 1.2% the Earth's population will double to 14.6 billion in 58 years. Such a total is inconceivable and avoidable. There has been debate about whether the sheer number of people is the problem or whether their unequal or excessive consumption patterns are the problem. The problem with that debate is that it poses a false choice which need not be resolved here. That is while there is no question that there is substantial inequality among people of income and wealth and therefore of Earth degrading consumption there is also no question that every human being has an impact on the Earth. Putting it simply more humans produce more carbon. Further more humans have produced too many more humans. There are two basic elements of each human's impact on the Earth. First s/he consumes energy and resources and s/he has the capacity to have children. Whatever the world's consumption patterns there will be less consumption and Earth degradation when there are fewer people. This truth is a corollary to the message of population stabilization advocates since the 1970s. Whatever your cause it's a lost cause until we control population growth. The first of the 21 proposals is that all humans be encouraged to have no children or at most one child. The alternative to achieving population reduction through voluntary means is to endure catastrophes and collapse and gross reduction of biodiversity.

**The Human Population** Charles F. Gritzner, 2009. How many is too many? In regard to the human population people have been asking this question for centuries. The current world population is approaching seven billion people. At the current 1.2 per cent rate of annual increase the population will reach a whopping 9.5 billion people by 2050. *The Human Population* explores whether this statistical information is cause for alarm examining the issues of feeding such a population, sustaining natural resources, having enough living space and other necessities for a comfortable life on Earth. Is the world suffering from a terrible population explosion or is life getting better for most people despite a growing population? These are some of the
