Solar Systems Objects

The image features a central diagram of the solar system with the Sun at the center, Earth, and other planets like Saturn and Mars. Below it, a laptop displays a lesson plan titled "SC.5.E.5.3 Solar System Objects". To the right, several worksheets are shown, including one titled "Solar System Objects" with sections on Comets, The Flying Objects, Dwarf Planets, and Asteroids. The worksheets contain text, images, and a large orange arrow pointing to the code "SC.5.E.5.3".

Comets
A comet is a chunk of frozen gases, rock, ice, and dust. Comets have long orbits around the sun. They come close to the sun, begin to break apart, and release gas and dust. These particles reflect light from the sun.

The Flying Objects
Besides planets, there are many other bodies that orbit the sun. Let's find out about some of them.

Asteroids
Asteroids are rock and iron objects that orbit the sun. Millions of them are found in the wide region between Mars and Jupiter.

Meteoroids
Each day, tons of meteoroids are passing through space. Most meteoroids burn up in Earth's atmosphere, causing a streak of light called a meteor. Meteoroids that reach Earth's surface are called meteorites.
