Debugging Systems-on-Chip Bart Vermeulen,Kees Goossens,2014-07-14 This book describes an approach and supporting infrastructure to facilitate debugging the silicon implementation of a System on Chip SOC allowing its associated

product to be introduced into the market more quickly Readers learn step by step the key requirements for debugging a modern silicon SOC implementation nine factors that complicate this debugging task and a new debug approach that addresses these requirements and complicating factors The authors novel communication centric scan based abstraction based run stop based CSAR debug approach is discussed in detail showing how it helps to meet debug requirements and address the nine previously identified factors that complicate debugging silicon implementations of SOCs The authors also derive the debug infrastructure requirements to support debugging of a silicon implementation of an SOC with their CSAR debug approach This debug infrastructure consists of a generic on chip debug architecture a configurable automated design for debug flow to be used during the design of an SOC and customizable off chip debugger software Coverage includes an evaluation of the efficiency and effectiveness of the CSAR approach and its supporting infrastructure using six industrial SOCs and an illustrative example SOC model The authors also quantify the hardware cost and design effort to support their approach
